Green Sun Rising adds extended range electric vehicle to their fleet

Windsor, Ontario – March 5th, 2013 Green Sun Rising Inc., Windsor's longest operating renewable energy company, recently added an extended range electric vehicle, a Chevrolet Volt to their vehicle fleet. Associate Michael Schneider, one of the company's sales agents, drives the new car – and is quite taken with the advantages of his new toy: "It is extremely cheap to drive this car, I hardly pay \$1 per day for the electric charge and can go as far as 75 kilometers with one full charge."

Michael makes good use of Green Sun Rising's Level 2 Charging Station, the first electric vehicle charging station in Essex County. And he is in the process of setting up his own charging station at his home in Windsor.

"Working for a renewable energy company it really was kind of natural for me to get an electric vehicle. And I was quite impressed by the comforts of the Volt", adds Schneider, "I did not have to cut back on amenity in exchange for having the obvious benefits of an electric car."

In adding an electric vehicle to the fleet and utilizing their outstanding existing infrastructure, Green Sun Rising is yet again one step ahead of the competition and continues to work hard to keep that head start.
