Green Sun Rising welcomes its newest family member: The Solar Bikeport!

Windsor, Ontario – February 15th 2012 – Green Sun Rising, Windsor’s longest operating solar company, is proud to present the newest member of its growing solar photovoltaic product family – **The Solar Bikeport**.

This new and innovative product combines the business with pleasure, as Green Sun Rising’s president Klaus Dohring points out: “We definitely put a lot of thought into the design of our **Bikeport**. We were aiming for the combination of function and form.”

The all-aluminum unit features a clean and modern design, making intelligent use of its light yet durable components. It sure is pleasing to the eye but what makes the new **Bikeport** so special? First of all there is the functionality. The product protects a bicycle or an E-bike against the elements. But here is the clue: Green Sun Rising’s solar experts have installed three flexible solar modules on the corrugated roof of the **Bikeport**. These so called thin-film modules with a combined output of over 200W will produce enough power to fully charge an E-bike battery during the course of one sunny day.

In combination with a storage battery the **Bikeport** will even provide enough electricity for a full charge if the sun does not shine. And we won’t leave you in the dark – energy efficient 2 Watt LED lamps will provide enough light for unlocking your Bike or E-bike even at night.

If you are interested in the new **Bikeport**, please contact us regarding pricing and delivery details.
