Inauguration of Windsor's first Solar Tracker System

Windsor, Ontario – August 11, 2010

Tracker4solar, a brand of Windsor's pioneer solar company Green Sun Rising Inc., celebrates the inauguration of Windsor's first solar tracker system under the Ontario-wide microFIT-program.

The Tracker is equipped with 18 photovoltaic modules provided by scn energy America Inc., a division of scn energy AG, one of Europe's leading providers of PV solar solutions. The solar 3kW-tracker follows the path of the sun during the day. By following the sun, the solar system generates about 30 per cent more power than a stationary system.

The system launch will take place on **Tuesday, August 24 at 1 p.m.** at the Renewable Energy Technology Center, 1680 Kildare Rd.

Windsor Mayor Eddie Francis will be Green Sun Rising's guest of honour at the official ceremony.

By manufacturing and selling locally-produced solar tracker systems, Green Sun Rising strengthens its position as Windsor's leading renewable energy company, in turn strengthening the city of Windsor's growing reputation as Ontario's solar capital.

Green Sun Rising also produces high-quality mounting systems at its facility in Windsor. These mounts4solar mounting systems are suitable for mounting all kinds of PV modules, either on rooftops or on the ground.

At its Windsor facility, Green Sun Rising and its partner company, scn energy America, showcase the best in renewable energies, with a focus on solar technologies. Both solar photovoltaic (PV) and solar thermal technology are shown, demonstrated and explained.
