## **Solar Innovations by Green Sun Rising: Introducing the Solar Bikeport, Solar Bench and the Solar Bar!**

**Windsor, Ontario – July 20<sup>th</sup> 2012** – Green Sun Rising, Windsor's longest operating solar company, continues its tradition of inventing innovative solar photovoltaic products. Today, the company proudly introduces their newest solar family member, the **Solar Bar**.

Like the recently introduced Solar Bikeport and the Solar Bench, the new **Solar Bar** features a clean and modern design, making intelligent use of its light yet durable components. The structure is made out of aluminium, the counter is made out of 100 percent pure Canadian Cedar wood, stained and finished by hand.

But what is real bar without cold beverages? Here comes the clue: The **Solar Bar** is equipped with a commercially available energy star rated and compressor driven bar fridge – guaranteed to cool down your beer with the power of the sun! Because what could taste better than an environmentally friendly cool beer?

To achieve this, Green Sun Rising's solar experts have installed three flexible solar modules on the arched roof of the **Solar Bar**. These so called thin-film modules with a combined output of over 200W produce enough power to run the bar fridge and even a 2-Watt LED light. If fully charged, the storage batteries have enough capacity to power the Solar Bar for two full days.

If you are interested in our new **Solar Bar** or the Solar Bikeport or the Solar Bench, please contact us regarding pricing and delivery details. The whole solar product family is readily available for sale.
